REFLECTION

BORJE, BRIAN VIEL V. BSIS 2B WEB SYSTEMS

It was fun and though there were difficulties in what to do it was later fixed, I especially enjoyed teasing my group mates into hurrying up because they did not understand what was needed and where goes where but of course with my help, they were able to succeed I even lent my laptop to Raiver since his sister took his laptop and we did the coding in the municipal library since the place had Wi-Fi and air conditioning, we did the backend and were just about to api test but the library was closing.

I went to school today (November 3, 2026) because I had to take a special exam from Sir Zabdiel for being a month behind midterms because I got hospitalized that day plus multiple suspensions and holidays and got a 39 out of 60 because I had not noticed the part 3 which was 1 – 10 but in my defense I didn't notice it because the font was really small and really compact which is really difficult for a blind person like me to do.

Back to the topic after I left the school I went to the library and waited for Raiver, an hour passed and I went home and he messaged me that his dad had high blood and had to take care of him I told him we could meet tomorrow and now I had to commit the files to the repository, after I targeted and added commits to each file and I successfully committed them.

But here is the bad news I uploaded the backend that is a fact but in turn I had erased the files that were in the repository, I immediately messaged my groupmates if they had backups and luckily they did and I made new folders for the files.
